July 23, 2015

Dear Public Storage Property Manager,

Public Storage is engaged with Google Inc. in a program that will help Google increase location accuracy near our venue.

As part of this program, we are permitting Google representatives to enter publicly accessible areas (including areas behind the gate) in our store/business locations to collect publicly visible data and signals which can be used to provide location and geo-related services (such as WiFi, GPS, cell tower, Bluetooth, etc); and other related information (such as signal strength etc.)"

This process is simple and minimally disruptive, and it will not require assistance from our staff or interfere with our daily operations: Google employees and contractors will enter our store/business location and walk around for a short period with a standard Android device.

If you have any questions or concerns, please contact me at 818.244.8080 x1670 or [dcollins@publicstorage.com](mailto:dcollins@publicstorage.com)

Kindest Regards,

A handwritten signature in blue ink, appearing to read 'David W. Collins', written over a horizontal line.

David W. Collins  
Director, Corporate Marketing
